STATHMOS-LINDELL ELECTRIC WEIGHT RECORDER

Manufacturer: Stathmos Scale Manufacturing Ltd.,
8 Steelcase Road
Markham, Ontario

Apparatus: Electric Weight Recorder, Model 1250

Application: This weight recorder is approved for use on all approved models of Stathmos and Stathmos-Lindell scales to which it is adaptable.

Description: This weight recorder consists of two elements equipped with type for the printing of weights. The primary printing element is a disc attached directly to the printer shaft and having type for the weight reading except for the final digit. The other element is a movable type rod with types for the final digit. When a weighing is performed the type rod is so actuated as to position the correct final digit in alignment with the appropriate set of digits on the type disc for printout.

Weight scanning, clutching of type elements, and the printing function are performed by electrical means. Actuation of the print cycle is by means of a push button located at the printer housing. A photoelectric detector system is used to prevent operation of the printer until the scale is at rest.

The printer is capable of printing on tickets or tape and can record supplemental information such as tare weight, code numbers or letters and date.
