OTTAWA, May 30, 1967

APPROVED: COLUMBIA TRAILER - CALIBRATION MARKER FOR VEHICLE TANKS - MODEL CTC-#1

manufactured by: Columbia Trailer Co. Ltd., Burnaby, British Columbia.

Apparatus Listed: Multiple marker bracket assembly for vehicle tank compartments.

Rating of Apparatus: The assembly may be used in any vehicle tank compartment for which it is suitable.

Conditions: The assembly shall be located sufficiently close to the centre of the compartment both laterally and longitudinally so that if the truck is off-level by  $1^{\circ}$  the error in capacity does not exceed  $\pm 0.125\%$ .

Description: This assembly is designed to support and protect the fingers, and to provide a convenient method of adjusting the finger position. The back of the holder is cut away to ensure there is flow of liquid past the finger to prevent build up of foam.

Testing: When calibrating tanks using these marker assemblies, it should be checked that the assembly is rigidly secured to the dome opening. Particular care should be taken to ensure that the jam nuts are tightly seated, as there is nothing to stop the finger from rotating, if the jam nut is loose, except the sealing wire.

Reference: SW-18-1

Note: Approval is granted under the Weights and Measures Act, Chapter 292, and Regulations thereunder (P.C. 6894) for use in Canada under the general conditions of P.C. 6894, and under any special conditions listed above.
