

RECORD OF APPROVAL ACTION

Approval listing Number - S.WA-783 Addendum 1

(Issued in advance of preparation of draft Approval Listing only
in case of interim Approval).

Ottawa, October 24, 1979

Company Requesting Approval - Neptune Meters Limited,
3526 Lakeshore Blvd. West
Toronto, Ontario. M8W 1N7

Type of Device

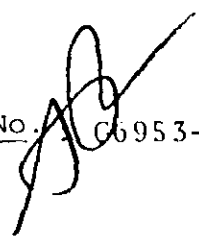

Volumetric (gross) register for use on Neptune 1½-inch and
1½-inch meters with ATC for LPG.

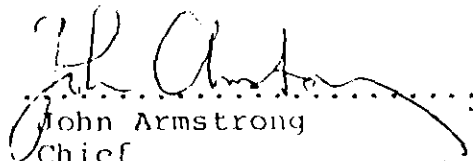

Model No.: 94446-001

Description: The outer case used for this volumetric gross counter
assembly is the same as that for the 2-inch meter; for technical
reasons, it was not possible to install gears to make the RH
wheel of the counter read directly to tenths. Instead, the RH
wheel turns twice for each gallon or after conversion for each
litre. The casting is stamped "TEST ONLY" directly above the
counter, and a metal plaque is attached on top of the counter
with the legend "DIVIDE BY 2".

These counters are to be installed at the time of
conversion to metric, supplies permitting, and the ATC at that
time will be marked "15°C Base" and the revised version of Chart
#1 should be used when testing these ATCs. To make errors in
reading the counter negligible, tests using quantities of 500
litres (counter reading 1000) should be made.

Reference: Letter of approval to start manufacture, dated March 5, 1979.
